

**BR20TKR004
Manual Brushing and Weeding – Revelstoke and Golden**

Q: I'm looking at the brushing contract you have up for bid, and I'm having trouble finding what species is required to cut on each block. If you could direct me to that information it would be great. My guess is they are all fire weed blocks but I could be wrong.

A: **Fireweed is just one component of the blocks however there are numerous other species that require treatment. While herbaceous make up the majority of target species there is also some woody brush on each block.**

Target species is described in Schedule C, Article I: General Conditions as:
"Target Vegetation" means any herbaceous or woody non crop tree species within the treatment zones, which could grow taller than the crop tree over the growing season".
